

FOR IMMEDIATE RELEASE

Live 3D Poker Introduces Real Money Play

First 1,000 depositing players will receive a 100% bonus up to a maximum of \$500

CURACAO, NETHERLANDS ANTILLES – Jan 18, 2006 – Live 3D Poker (www.live3dpoker.com) today announced that it would immediately begin operating real money poker games. Up until now, Live 3D Poker, which launched in April 2005, had exclusively offered play money games that allowed players to hone and improve their card-playing skills, but not to bet with or win any real money. That will all change beginning today, as players will be able to sit at real money tables with other individuals from around the world in such popular games as Texas Hold 'Em, Omaha, Five Card Stud and Seven Card Stud.

Offering some of the most realistic game play available anywhere on the internet, Live 3D Poker engages players with the thrill of realistic, full screen, fully immersive three dimensional graphics.

“Since we launched Live 3D Poker last spring, we have had excellent feedback from our customers regarding the design and format of our software and in the quality and functionality of the game playing engine,” said Fred Luchetti, general manager, Live 3D Poker. “Now, we are happy and proud to be able to offer customers the one feature many have been asking for – real money game tables.”

Privacy and Confidentiality Assured

Because security is a prime concern both for Live 3D Poker and its customers, all Live 3D Poker transactions are transmitted only over encrypted and monitored channels. All accounts and balances are verified and audited for accuracy and security. Live 3D Poker uses 256 bit encryption to ensure the highest level of privacy and confidentiality of player information and activity in all of their online poker rooms.

As an incentive to encourage players to try their hand on the new real money tables, the first 1,000 players to deposit funds into their account will receive a 100% bonus up to a maximum of \$500.
